

BRIDGE ELEVATIONS

Use this information as an approximation only. Always slow down and use caution and make sure you have adequate clearance before proceeding under bridge. The bridge clearance is dependent on water surface elevation. Clearances are given in feet. Also take into account the prevailing winds and upper river flows which can affect the water elevations in different areas on the lake, so please check the water levels link on the left side of the front page of our website or for more information you can call (601)992-9703 before attempting to go under bridges.

Normal summer pool 297.5

Location	Bottom of bridge	Bridge clearance at normal summer pool
Center of Highway 43	308.5	11.0
Twin Harbor	305.7	8.2
Northbay	306.5	9.0
Pelahatchie Bay North side center looking east from main lake	308.0	10.5
Pelahatchie Bay South side center looking east from main lake	308.5	11.0
